

Codebook

Digital Financial Literacy and Capital Access among Youth and Early-Stage Entrepreneurs in India

Dataset Description

This codebook documents the variables contained in the **synthetic anonymised survey dataset** accompanying the working paper *“Digital Financial Literacy as a Determinant of Capital Access among Youth and Early-Stage Entrepreneurs in India.”* The dataset reflects the structure, measurement scales, and distributional properties of the original survey data used for empirical analysis, while ensuring participant confidentiality.

- **Data type:** Synthetic / simulated anonymised survey data
- **Study design:** Cross-sectional
- **Sample size:** 100 youth and early-stage entrepreneurs
- **Geographical context:** India
- **Measurement scale:** 5-point Likert scale (1 = Strongly Disagree; 5 = Strongly Agree)

Variable Definitions

Identifier

Variable	Description
----------	-------------

Participant_ID	Anonymous identifier assigned to each participant (P001–P100)
----------------	---

Digital Financial Literacy (DFL)

Measures respondents’ capability to understand, evaluate, and use digital financial services for business purposes.

Variable Description

DFL1	Ability to compare digital loan or credit options
DFL2	Understanding of interest rates and fees on digital finance platforms
DFL3	Confidence in completing online KYC and documentation processes
DFL4	Awareness of risks related to digital financial fraud
DFL5	Use of digital tools to track and manage business finances

FinTech Adoption (FTA)

Captures the extent of respondents' use and perceived usefulness of FinTech platforms.

Variable Description

- FTA1 Use of digital payment platforms for business transactions
- FTA2 Experience using digital lending or credit applications
- FTA3 Perceived ease of accessing finance through FinTech platforms
- FTA4 Trust in FinTech platforms for financial transactions
- FTA5 Intention to continue using FinTech services for business purposes

Financial Self-Efficacy (FSE)

Assesses respondents' confidence in managing financial decisions and challenges.

Variable Description

- FSE1 Confidence in making financial decisions
- FSE2 Ability to plan loan repayments before borrowing
- FSE3 Ability to manage unexpected financial challenges
- FSE4 Ability to independently evaluate financing offers
- FSE5 Belief in improving financial outcomes through personal actions

Behavioural Biases (BB)

Represents behavioural tendencies that may influence financial decision-making.

Variable Description

- BB1 Tendency to avoid borrowing despite potential business benefits
- BB2 Overconfidence in personal financial judgement
- BB3 Loss aversion (greater sensitivity to losses than gains)
- BB4 Present bias (preference for immediate benefits over future outcomes)

Access to Capital (CA)

Measures respondents' perceived ability to obtain timely and adequate financing.

Variable Description

CA1	Ability to access credit when required
CA2	Ability to obtain adequate funding amounts
CA3	Timeliness and efficiency of the financing process
CA4	Access to capital at reasonable cost and terms
CA5	Availability of multiple financing options

Demographic Variables

Variable	Categories
Gender	Male; Female
Age_Group	18–25; 26–35
Entrepreneur_Type	Youth Entrepreneur; Early-Stage Startup
Years_of_Business_Operation	<1; 1–3; 3–5; >5

Notes on Data Use

The dataset is **synthetic and anonymised** and does not contain actual respondent-level data. It has been generated to support methodological transparency, replication, and pedagogical use. Qualitative interview data are excluded due to ethical and confidentiality considerations.
